Network Security Assessment

Devfense NSA helps you keep your network secure against attacks and minimize unintentional mistakes by authorized users. Securing your network infrastructure involves a process of proactive risk management requiring coordinated security improvements.

Devfense NSA can help you achieve network security as you become more proactive in reducing business risk while improving network security compliance.

Gain better knowledge and control of your network. Devfense NSA helps you:

- Inventory your networked assets, including IP-based physical hardware (servers, workstations laptops), ports, networked printers, firewalls, their operating systems, and understand the manner in which they are connected to the network
- Understand your requirements for patch management and your need to identify and secure required Windows-based services. Eliminate those services which pose potential risks.
- Ensure security against threats identified by OVAL and SANS Top 20
- Identify and address potential network based vulnerabilities with an unbiased third-party review
- Keep informed of issues that may impact your network
such as your physical environment and your back up systems and procedures
- Prioritize your network remediation tasks

■ Security breaches cost \$90 to \$305 per lost record.

- Forrester Research

About Boonbox

Boonbox, a division of Pacific Coast Information Systems Ltd. (PCIS), specializes in productivity solutions that deliver immediate results. We enable and enhance your I.T. department's ability to address security, compliance and data integrity issues.

Boonbox customers benefit from a boxed service approach that brings measurable results of proven expertise packaged with technology.

devfense NSA

Devfense NSA helps your business develop an inventory of your network and assess vulnerabilities. It provides a roadmap to security compliance.

Standards-based Methodology

Devfense NSA is deployed using the world-recognized ISO (International Organization for Standardization) code of practice for information security. As well, Boonbox operates using industry-standard best practices. By leveraging established guidelines and general principles for security management, Devfense NSA helps you achieve proven standards for security management.

Preparation for Network Security Compliance

Devfense NSA prepares your organization proactively for third-party network security compliance auditors. The network security assessment helps you detect and remediate your network security gaps. Compliance auditors do not have to be feared; rather, the external audits will reaffirm the positive steps you have taken to ensure the security of your organization by using Devfense NSA.

A Roadmap to Security Compliance

Devfense NSA provides a roadmap for your IT management to prioritize security improvements and make the case for IT security to CEOs and CIOs. With a report containing information about your network inventory, vulnerability assessment and fix recommendations, your organization will be prepared to do what is necessary to secure your network.

The network security assessment reports are concise and readable, with priority security fix recommendations prioritized according to level of severity.

Recommended solutions are labeled according to "HIGH", "MEDIUM" or "LOW" priority. Devfense NSA helps your organization define an effective and realistic schedule for implementing security improvements.

Begin to secure your network today with Devfense NSA.

Devfense NSA reports help your organization define an effective schedule for implementing security improvements.
